Dear Patient,

We would like to invite you for a review with our practice nurse.

This year our local guidance on categorising blood sugar results have changed and we have introduced a new diagnostic code for pre-diabetes. You are receiving this correspondence, as at some stage in the past your blood sugar levels have been in this range and therefore have a diagnosis of pre-diabetes.

We are offering all our patients who have had blood sugars in the pre-diabetes range a review with our practice nurse and extra support with managing this. We will include a booking link with this message.

Kind regards,

University Health Service.
